

Domain and Third-Party Accounts Authorisation

Agreement _____ · Date _____

1. Parties

_____ ("the Client", _____) authorises **PandaDev** ("the Studio", support@pandadevhub.com) to act on its behalf for the accounts listed below, for the purpose of the Client's project.

2. Accounts covered

Service	Account / domain	Access given
Domain registrar	_____	DNS changes, renewals
Hosting	_____	Deploy, configure
Email provider	_____	DNS records (SPF, DKIM, DMARC)
Apple App Store	_____	Upload builds, store listing
Google Play	_____	Upload builds, store listing
Payments (e.g. Stripe)	_____	Developer / API access
Other	_____	_____

3. Ownership

The Client confirms it owns, or is authorised to manage, every account listed. The accounts stay registered in the Client's name, and the Client keeps the main (owner) login. The Studio is given its own user or delegated access wherever the service allows, instead of the Client's password.

4. What the Studio may do

The Studio may make the changes needed for the project, such as DNS records, deployments and store submissions. It will not transfer, delete or close any account, buy paid services or change billing without the Client's written approval.

5. Costs

Fees charged by these services (domain renewals, developer accounts, hosting) are paid by the Client unless the agreement says otherwise.

6. Security

The Studio keeps any access details in an encrypted password manager, uses two-factor authentication where available, and never shares them with anyone outside the project.

7. Ending the authorisation

The Client may withdraw this authorisation at any time by written notice. When the project or support ends, the Studio removes its own access and hands over any credentials it created, within **5 business days**.
